Senate Bill 126 (Substitute S-2 as passed by the Senate)

Sponsor: Senator Jason E. Allen

Committee: Economic Development and Regulatory Reform

Date Completed: 2-23-09

# **RATIONALE**

Under the plant rehabilitation and industrial development Act, commonly referred to as P.A. 198, local units of government, with the approval of the State Tax Commission, may industrial facilities exemption grant certificates to new and speculative buildings and replacement facilities located in a plant rehabilitation or industrial development A certificate essentially grants a district. property tax abatement to an industrial facility located on industrial property, which then is subject to an industrial facilities tax that is lower than standard property taxes. After the Attorney General ruled in 1999 that a merchant electric generating plant was not "industrial property" eligible for an industrial facility tax exemption (OAG 7027, 8-5-99), Public Act 140 of 1999 amended the definition of "industrial property" in P.A. 198 to include an electric generating plant not owned by a local unit of government, but only for applications for a tax exemption certificate approved by a local unit between June 30, 1999, and June 30, 2002. Public Act 280 of 2002 extended the local approval deadline to December 31, 2007.

A proposed development of an electric generating plant in Mancelona, in northern Michigan, is in the fund-raising stage. The project's proponents hope to raise \$140.0 million to build a wood-fired (biomass) power plant. The plant would burn wood chips and other wood waste products to create enough electricity to fuel about 30,000 homes. In order for the developers to attract the funding to make this project successful. thev believe thev significant tax incentives like qualification as industrial property under P.A. Therefore, it has been suggested that some local units should be granted the ability to

approve P.A. 198 certificates for biomassfueled electric generating plants.

# **CONTENT**

The bill would amend the plant rehabilitation and industrial development Act to allow local legislative bodies in some counties to approve an exemption certificate for an electric generating plant fueled by biomass that was not owned by a local unit of government, through the end of 2013.

exemption applications For certificate approved by the legislative body of a local governmental unit between June 30, 1999, and December 31, 2007, the definition of "industrial property" includes an electric generating plant that is not owned by a local unit of government, including an electric generating plant fueled by biomass. addition, the definition specifically excludes property of a public utility other than a plant that meets this description. Under the bill, applications approved by a local legislative body on or before December 31, 2013, the definition would include an electric generating plant that was fueled by biomass, was not owned by a local unit, and was located in a county with a population of more than 22,000 and less than 26,500. (According to the 2000 Federal Census, nine Michigan counties would meet these Antrim, Charlevoix, population criteria: Cheboygan, Gladwin, Manistee, Menominee, Osceola, Otsego, and Roscommon.)

MCL 207.552

## **ARGUMENTS**

(Please note: The arguments contained in this analysis originate from sources outside the Senate Fiscal Agency. The Senate Fiscal Agency neither supports nor opposes legislation.)

## **Supporting Argument**

According to information supplied to the Senate Economic Development and Regulatory Reform Committee by the Northern Lakes Economic Alliance, Mancelona Renewable Resources Company is in the process of raising funds to build a cogeneration, wood-fired power plant in Antrim County. The power plant would burn wood chips and slash (waste wood) to create steam that would turn a turbine to create electricity. By burning about 400,000 tons of wood per year, the completed plant would create 36 Mw of electricity, or enough to fuel 30,000 homes, and would employ about 30 full-time workers and create hundreds of ancillary jobs. The construction project also would create about 150 temporary jobs. In addition, the proposed plant's success could lead to other job-creating and alternative energy-generating opportunities. These and the potential for future development could be a boon to a small community in a region of the State that has been hit particularly hard by the current economic downturn. In order for the company to secure the funding it needs to achieve its goals, however, its principals believe they need the tax relief available under P.A. 198. The provision of that Act under which electric generating plants previously could be approved for an industrial facilities tax exemption has A new authorization for an expired. exemption for electric generating plants, fueled by biomass, in small counties would assist the project in Mancelona and spur the creation of new jobs and more energyefficient technologies.

**Response:** Perhaps some form of assistance in financing, developing, and operating the plant, other than a property tax exemption, could be more beneficial in getting this project off the ground without having an adverse effect on the School Aid Fund, which would have to be used to maintain per-pupil funding.

## **Opposing Argument**

The Act is designed to attract business development into Michigan, but power plants that would serve Michigan customers are highly likely to locate in this State with or

without a tax exemption. Providing P.A. 198 eligibility to power plants does not offer any particular incentive for a company to locate in Michigan, and extending that eligibility to power-generation plants could result in all power plants seeking a P.A. 198 tax exemption certificate, which could come at great expense to the School Aid Fund.

Including electric power Response: plants in the Act's definition of "industrial property" has a proven track record. According to the House Fiscal Agency analysis of the 2002 legislation that extended the local approval deadline to December 31, 2007, supporters of the P.A. 198 tax abatement claimed that it had attracted 15 new generating plants to Michigan communities, expanding the State's power-generation capacity creating new jobs. Moreover, the exemption authorized under the bill would be limited to biomass-fueled plants in counties meeting specific population criteria. At this time, it appears that only the plant in Mancelona would qualify for a P.A. 198 abatement.

# **FISCAL IMPACT**

The bill would reduce local unit revenue, and increase required expenditures from the School Aid Fund, by an unknown amount. The bill also could reduce revenue to the School Aid Fund by an unknown amount under certain circumstances. The magnitude of the changes could be significant, but based on recent history the likely impact would be minimal.

Under the statute, exemption certificates must be approved by the local unit in which the property is located and, once approved, they reduce the non-State Education Tax property taxes by 50%. The State receives revenue from both the State Education Tax and the portion of property tax revenue attributable to mills levied for school operating purposes on nonhomestead property. The latter revenue source reflects a tax rate of 9 mills, because without the exemption certificate the school district would receive 18 mills. As a result, the bill would increase revenue received by the State, assuming the investments would not occur absent the bill. However, the bill would reduce property tax revenue received by local units, including revenue from what would otherwise be 18 mills levied on

nonhomestead property for school operating purposes. Reductions in local school district revenue would increase School Aid Fund expenditures in order to maintain per-pupil funding guarantees, and the magnitude of the change would be approximately 50% more than any increase in revenue from the State Education Tax.

For new facilities, the State Treasurer may exclude half of the mills under the State Education Tax. To the extent that such an exemption was granted, the bill also would reduce School Aid Fund revenue.

The actual impact of the bill would depend on various circumstances, including the number of certificates granted between now and 2013, the value of the plants affected, and the average value per megawatt of capacity for those plants. Occasionally, these plants are located in a Michigan renaissance zone, where a plant would pay even less in property taxes and would not be affected by the bill. To the extent that plants located in renaissance zones, the fiscal impact of the bill also would be lower.
